Software Product Description

Management for IT Business

	<p>Key Functions</p> <ul style="list-style-type: none">• Customers able to log requests over the Web• Customers able to run request status and progress reports across the Web• Time Zone capable for system users, work calendars and service level agreement management.• Secure password controlled site and data access• Personalised, customer specific service desks dynamically managed using ALERT™ – no HTML editing• Software product release note reports able to be generated by customers in real time over the Web• Information presented to customer controlled by Alert™• Web access statistics

The following is an approximate guide to the configuration required for an Alert™ installation

This is a guide only. Actual requirements will vary depending on number and type of concurrent users and other factors. An infrastructure and capacity plan is required to be developed for each Alert™ installation. This plan may be developed in consultation with the Alert™ team.

Hardware Requirements	<p>Database Server: Used to run MS SQL Server database and Alert™ Background Manager. Minimum 1 GHz, 1 Gb available disk space, 2Gb RAM (estimated based on 10 concurrent Alert™ users)</p>
	<p>Internet Information Server: (Optional – required for Alert™ Web Services) This may be installed on the Database Server. Database Server resources and configuration will need to be increased to take this into account. Alternatively IIS may reside and run on another server and be used for Alert™ Web Services. Connectivity, security, bandwidth and other considerations will need to be taken into account.</p>
	<p>E-Mail Server: (Optional - required for messaging) Alert™ requires access to an e-mail server if messaging is to be used. Either MS Exchange or an SMTP server. The e-mail server should not be installed on the Alert™ Server. This is for performance and resource usage reasons.</p>
	<p>Clients: Personal Computers running minimum of 500Mhz Pentium, 100Mb available disk space, 512 Mb Memory.</p>
Software Requirements	<p>Database Server: Recommended Operating System: MS Windows 2003 Server Windows Terminal Services (Optional)</p> <p>Database: MS SQL Server 2005</p> <p>Additional Software: Microsoft Office 2003 (if using windows terminal services)</p>
	<p>Internet Information Server: (Optional – required for Alert™ Web Services) Internet Information Server such as MS IIS 5.0 (required by Alert™ Web</p>

Software Product Description

Management for IT Business

	Services)
	MS Exchange Server OR SMTP e-mail server: (Optional - required for messaging) MS Exchange Server or discuss other options with VBS technical support.
	Clients: Operating System: MS Windows 2000, XP, Vista Optional Software: MS Office with MS Excel and MS Word MS Outlook or other e-mail client (used for messaging)
Software Licensing	Each installed Alert™ database requires a license, which is limited to an agreed number of concurrent users or database connections. The terms and conditions of the Alert™ license are defined in the Alert™ Standard License Agreement.
